SUMMARY

Fresh graduate with a Bachelor's degree in Information Technology from the Technological University of the Philippines, with internship and project experience in software application development and business solution implementation. Skilled in web and mobile application development, database management, REST API integration, application testing, debugging, and Microsoft Power Platform. Adaptable and detail-oriented, with strong problem-solving skills and a willingness to learn new technologies and contribute to practical, user-focused solutions.

EXPERIENCE

Telstra Foundation Philippines

IT Intern

February 2026 – June 2026

- Developed a business application using Microsoft Power Platform to digitize and automate manual workflows, improving document and data management.
- Worked with stakeholders to understand business requirements and deliver a user-friendly application aligned with operational needs.
- Conducted system testing and gathered end-user feedback to identify usability issues and support iterative improvements before application launch.
- Applied problem-solving and analytical skills to troubleshoot application issues and improve the overall user experience.

PROJECTS

Power Platform Business Workflow App – Telstra Foundation Philippines

- Developed a business workflow app with Power Apps as the frontend and SharePoint as the database, replacing manual processes with a centralized system for request and document management.
- Built Power Automate flows to auto-load suppliers, reducing manual input, and to generate request IDs and other request details automatically and Designed Power BI dashboards to visualize and monitor requests.

NoiseWatch: Reporting and Mapping Disruptive Urban Noise

- A community-driven platform that lets residents record, analyze, and report noise disturbances directly to their barangay – backed by real-time AI audio analysis and GPS location tagging. Detects and ranks the sources behind a recording (music, traffic, construction, etc.), measures decibel level and distance, and flags likely violations such as entertainment noise during quiet hours, turning a raw audio clip into a barangay-ready report.

CircuitHub

- Designed and built a web-based inventory management system for electronic components, featuring real-time stock monitoring, automated low-stock alerts, full CRUD operations, and downloadable PDF analytical reports.
- Integrated user authentication and role-based access controls using Flask and JWT, enhancing data security and restricting sensitive inventory features based on account permissions.

SKILLS

- Microsoft Power Platform: Power Apps, Power Automate, Power BI, SharePoint
- Languages: JavaScript, TypeScript, Python, Java, PHP, SQL, VB.NET
- Frontend: React, React Native, HTML, CSS
- Backend: Node.js, Flask, Laravel
- Databases: MongoDB, SQL
- Development: REST APIs, CRUD, Testing, Debugging
- Tools: Git, GitHub, VS Code, Canva
- Soft Skills: Problem-Solving, Analytical Thinking, Attention to Detail, Adaptability, Communication, Teamwork

EDUCATION

Bachelor of Science in Information Technology

September 2026

- Technological University of the Philippines - Taguig
